WHAT IS SHOCKWAVE THERAPY?

Extracorporeal Shockwave Therapy (ESWT) is a groundbreaking non-invasive treatment method that harnesses the power of shockwaves to accelerate healing and relieve pain.

With our team of experienced podiatrists and state-of-the-art equipment, we are proud to offer this advanced therapy at Randell's Footcare.

HOW DOES SHOCKWAVE THERAPY WORK?

Shockwave Therapy works by delivering high-energy shockwaves to the affected area, stimulating the body's natural healing process.

These shockwaves help to promote:

- Blood circulation to previously damaged areas
- Regenerates damaged tissues aiding healing
- Reduces inflammation in localised areas

WHAT CAN SHOCKWAVE THERAPY TREAT?

This targeted therapy can be used as a successful treatment plan for the following health issues:

- Plantar Fasciitis
- Achilles Tendinopathy
- Patellar tendinopathy
- Medial tibial stress syndrome
- Lymphedema
- Heel Spur
- Shin Splints
- Stress Fractures
- Osgood-schlatters
